## Helpful info

- Refer to [User Guide](#) for the documentation on Intelligent Automation Cloud Express/Business.
- Subscribe to our [YouTube](#) channel to view short practical videos that will improve your automation skills.

## Getting Started

### Installation

#### Installation on Single Machine

Learn how to install all Intelligent Automation Cloud Express/Business on a single machine.

[See guide >>](#)

#### Business Edition Installation

Learn how to install Intelligent Automation Cloud Business to automate multiple business processes.

[See guide >>](#)

#### Modifying Setup

Learn how to change your application setup, e.g., install server components, modify the existing setup, or update to a new version.

[See guide >>](#)

### Getting Started with WorkFusion Studio

#### WorkFusion Studio Quick Start

Learn how to start using WorkFusion Studio to create automation scripts.

[See guide >>](#)

## Components

### WorkFusion Studio

Learn about WorkFusion Studio components: Recorder, Code Perspective, Preferences.

[See guide >>](#)

### Installation on Network of Machines

Learn how to install Intelligent Automation Cloud Business on a network of machines for team collaboration.

[See guide >>](#)

### Business Edition Setup

Learn how to create Control Tower users, install developer workstations, and connect them to the server.

[See guide >>](#)

### RPA Recorder UI and Features

Learn about RPA Recorder to capture your actions on the screen.

[See guide >>](#)

## Server Components

Learn how to enable the server components of Intelligent Automation Cloud Business and use them in managing and scaling your automation.

[See guide >>](#)

## File Storage

To simulate the use of an S3 storage in your business processes, Intelligent Automation Cloud Express/Business offers a local S3 File Storage, which is installed and configured on your machine during the application setup.

[See guide >>](#)

## Control Tower

The Control Tower application allows users to create business processes and combine bot tasks into complicated workflows.

[See guide >>](#)

# RPA Recorder Actions

## Surface-based Automation

### Troubleshooting Your Recording

Learn what types of errors you can face when using Recorder and how to fix them.

### Mouse and Keystrokes Actions

Learn how to use basic image automation using mouse and image editing actions.

[See guide >>](#)

## OCR

Learn how to use OCR actions to extract text from images, PDF files, and other sources.

[See guide >>](#)

## Desktop Automation

### Applications Actions

Learn how to open applications and work with the application windows in this section.

[See guide >>](#)

### Object Recording

Learn how to automate your desktop applications using clicks on Window controls.

[See guide >>](#)

### Object Inspecting

Learn how to inspect UI elements of your desktop applications using the built-in Inspector tool.

[See guide >>](#)

## Web Automation

### Web Actions

Learn about automating websites and web applications using Web actions.

[See guide >>](#)

### Using Xpaths

Learn how to get web elements' Xpaths for efficient web automation.

[See guide >>](#)

## Other Actions and Features

### Variables

Learn about types of recorder variables available and how to use them.

[See guide >>](#)

### For Each Loop

See how to use Loops to make your recording more robust.

[See guide >>](#)

### While Loop

Learn how to use the While action to implement a loop in your recording.

[See guide >>](#)

## Exception Handling

Learn how to use make your recording more stable with the Exception Handling action.

[See guide >>](#)

## Coding in WorkFusion Studio

### Custom Actions

Learn how to create Custom Actions in RPA Recorder.

[See guide >>](#)

## Control Tower

### Running Recording from WorkFusion Control Tower

Once you are done creating your RPA bot, you can publish, schedule, and manage it from WorkFusion Control Tower.

[See guide >>](#)

### Connecting Bot Steps in Business Process

Learn how to combine published recordings, insert manual tasks and rules in a business process, and execute it.

[See guide >>](#)

## Excel Actions

Learn how to automate Excel with Intelligent Automation Cloud.

[See guide >>](#)

### Code Perspective

See how to create bot tasks in WorkFusion Studio using Groovy.

### Using Server Components with Multiple Bots

You can run your business processes on multiple machines.

### Using Loops in Control Tower

Learn about two approaches of implementing loops in a business process: using input data and using the Loop recorder action.
