

# SAP GUI Desktop Automation

We have moved to a new documentation platform. This section is no longer supported. For the up-to-date information, see [SAP GUI desktop automation](#).

Starting from RPA Express **2.3.0**, you are able to automate the SAP GUI client like any standard desktop application, inspecting UI elements, locating their selectors, and using them in your scripts.

For environment setup and further automation, we recommend to use **SAP GUI v. 7.40** and **SAP GUI v. 7.50**.
